THE THREE CHECKS

From: EZMIX TROUBLESHOOTING

- 1 Make sure to be mixing materials when using your mixer. It has a high torque motor and will vibrate and be especially loud when used without materials.
- 2 Make sure you begin mixing in low gear (Level I) and have the variable speed dial in the lowest position and raise it incrementally.
- 3 Make sure to tighten the shaft to the blade and entire shaft to the mixer motor by hand initially and then with a wrench to prevent stripping the threads and to make sure unit is secure.
